

## Fault Simulator for Far East Test Equipment

An LA Authorised fault simulator is now available which enables a quick and effective method to check the output function for high voltage insulation and Earth Continuity test equipment.

The generally accepted method used throughout the Far East, to check test equipment is to 'short-circuit' the output leads. Research has proven that this method cannot give the necessary assurance with regard to the tests voltage and current applied.

By careful component selection, the LA fault simulator provides a verifiable method to check the specified test voltage and current requirements applied during production.

The design includes use of high tolerance p.c.b. mounted components, 'potted' for greater mechanical protection. Laser printed marking includes sequential reference numbering, registered for traceability and calibration.

The fault simulator can be ordered either in the UK or China. Simply advise the model of high voltage (hi-pot) test equipment available and the appropriate fault simulator will be supplied, directly to your supplier or UK office.

### KEY FEATURES:-

- a) Effective design
- b) Compact and easy to use
- c) English/Chinese Operation Procedure
- d) UK and China Technical support
- e) Annual Calibration check available
- f) Discounted for LA Members & Suppliers £100 or RMB equivalent.

Code of Practice

英国灯饰协会 操作守规

## 缺陷模拟测试仪-远东测试设备

英国灯饰协会授权的缺陷模拟测试仪现时有售，它能用快速，有效的方法检查测试耐压绝缘测试仪（高压机），和接地机的输出功能。

通常在整个远东接受测试方法，是将2条输出电线短路去测试设备。  
研究证明，这个方法不能达到测试设备电压，电流必要的保证。

由仔细的电子零件选择，灯饰协会的缺陷模拟测试仪  
提供一个可靠的方法在生产过程中达到检查指定测试设备电压，电流的要求。

设计包括使用高质电路板，零件，较大的机械保护，包括序号，追溯号 和校准的镭射标志。

缺陷模拟测试仪能在中国,英国订购  
简单的知会现用的高压机型号。  
适当的缺陷模拟测试仪会向你的供应商，英国办公室提供。

主要特征：

- a) 高效设计
- b) 方便，易使用
- c) 中英文版本操作程序
- d) 中国,英国技术支持
- e) 每年设备校准检查
- f) 协会成员公司&供应商折扣价  
£100英镑 或等值 RMB 。
